Dear Mr/Mrs/Ms

This research is very important for the forestry sector, especially to the government of Indonesia in making policy, among others: 1. Has been in line with the Indonesian government's policy to establish forest cover area in a watershed minimum 30%. 2. For monoculture plants has not been applied policies on the right area because the monoculture plant is very large influence on the flow of the surface and its impact on erosion and sedimentation. 3. Indonesia is currently faced with monoculture, especially palm and rubber 4. Hopefully this research will have a wider impact not only in Indonesia but

C1

also in other countries, especially in tropical countries.

Best regards,

Onesimus Patiung Indonesia
