Dear reviewer, thank you for the useful reply. Most of your reactions are clear to me and help to provide an added value to the paper. However, I have a question concerning your last remark (comparison with an established method) in order to understand it appropriately. Do I understand correctly that your suggestion is to determine a single rating curve (based on a well-chosen evaluation criterium) for (1) the complete data series of a station and (2) the delineated consistent periods using the BReach methodology in order to compare and - if possible - classify the (chronologically sorted) residuals? Thank you in advance for your reaction. Best regards, Katrien Van Eerdenbrugh
