We are pleased that the two anonymous reviewers considered that the paper was "technically sound" and would be "of interest to the readership of HESS". We thank them for useful and thoughtful comments and for identifying additional literature which we will incorporate into a revised manuscript. For the moment we have tried to respond to their comments (please see the attached pdf) and to identify where we believe the manuscript should be adjusted in light of the comments received to date.

Please also note the supplement to this comment:
