Received and published: 26 March 2018

The reviewers raised serious concerns about the paper, and especially about how the paper was structured. I agree with their comments 100%.

There is material here that is very interesting and very relevant to the new field of socio-hydrology, and for this reason I am willing to allow a resubmission of the paper along the lines that the authors have indicated.

Because of the substantial changes that the reviewers requested and the authors have agreed to do, it has to go through a thorough re-review, including possibly 2 of the old

C1

reviewers.

I look forward to this resubmission, which I will undertake to get reviewed as quickly as possible.
