

Response to referee comments on “Modelling salinity in river systems using hybrid process and data-driven models”, by Jason M. Hunter et al.

5 Note: This document contains the authors' responses to the comments of Referee #2. The comments made by the referee have been formatted in italic and coloured black, while our responses are upright and coloured blue.

Response to the comments of Referee #2

10 *The paper presents a well thought out and executed approach to model salinity in a complex river environment.*

We are very grateful to the reviewer for their kind words, and for their recommendation that the paper be accepted as is.
