

Interactive comment on “A Framework for Advancing Streamflow and Water Allocation Forecasts in the Elqui Valley, Chile” by Justin Delorit et al.

Anonymous Referee #1

Received and published: 10 April 2017

I have reviewed the changes made to the manuscript and I'm almost completely satisfied with the improved version. I recommend to accept it for publication in HESS after very minor changes have been performed.

I just want to suggest the authors to actually include at least part of their explanation in the manuscript, so other readers can take advantage of what they wrote in this review (even if the review is public). I think this is only necessary in these two cases in the original version:

- 1) P8L8 – on the spatial average.
- 2) P19L20-21 –on the 40%.

Finally, I still think it is better to call them "wind vectors" rather than "vector winds", but I am not asking the authors to make any change about that.

I do not need to review the manuscript again.
