Interactive comment on "Should radar precipitation depend on incident air temperature? A new estimation algorithm for cold climates" *by* Kuganesan Sivasubramaniam et al.

M Gabella

marco.gabella@meteoswiss.ch

The authors cite Saltikoff et al. (2000) stating that real-time change from Z-R to Z-S does not improve QPE. However, they should also mention Fig. 5 page 675, Saltikoff et al. (2015). There, by comparing Picture a) with Picture C) it seems clear that switching from Z-R to Z-S at the beginning of the winter season is better than keeping a fixed Z-R
