I am grateful to John Ding for his careful reading of the manuscript. I am thankful to him for bringing to my attention the similarity of mathematical form between the Budyko curve used in annual water balance and the Bakhmeteff function in unit hydrograph studies. I have indeed been interested in such connections - as highlighted in this manuscript between the SCS curve number of runoff generation and the annual rainfall partitioning.

However, I would not like to make a mention of it in the paper - not just yet - until I or someone had gone into it a bit deeper to recognize conceptual (not just mathematical)

connections between the phenomena they both represent.

I am still grateful to John Ding for bringing this to my attention.
