Interactive comment on "Subsurface hydrological connectivity of vegetated slopes: a new modeling approach" by Massimiliano Schwarz et al.

Anonymous Referee #1

Received and published: 9 January 2018

I tried to review the paper but only managed to struggle through the Introduction and the first part of Materials and Methods. The presentation was so chaotic and the review of the literature so poorly supported by references that I arrived at the conclusion that I could not provide a meaningful review.

The manuscript need very thorough editing before I can make more helpful comments - in its current state it takes too much effort simply to understand what you have done and why.
