

S1 Catchments features

This section details the dataset of the 50 catchments. Figure S1 shows the localization of the studied catchments. The catchments IDs are highlighted in figure S1. Table S1 presents the main features of the catchments dataset, including name, geographical position, area, elevation range, slope, annual P, annual PET, annual Q, time step, modeling periods P1 and P2.

S2 Model comparison over calibration periods

This section details the performance of MORDOR V0, V1 and V2 over the calibration periods P1 and P2. For the three considered models, tables S2 and S3 show the values of the individual associated calibration metrics (KGE(Q), KGE(Qsea) and KGE(FDC)) for all the catchments over the calibration period P1 (table S2) and the calibration period P2 (table S3). The following figures show, for the 50 catchments, the observed hydrograph (year by year) and those modeled by MORDOR V0, V1 and SD (calibration mode).

Table S2: The values of the individual associated calibration metrics (KGE(Q), KGE(Qsea) and KGE(FDC)) for MORDOR V0, V1 and SD for all the catchments over the period P1

S3 Model comparison over evaluation periods

This section details the performance of MORDOR V0, V1 and V2 over the evaluation periods P1 and P2. For the three considered models, tables S4 and S5 show the values of the individual associated evaluation metrics (NSE(Q), NSE(Qsea), NSE(dQ), NSE(FDC) and NSE(Qlow)) for all the catchments over the evaluation period P1 (table S4) and the evaluation period P2 (table S5). The following figures show, for the 50 catchments, the observed hydrograph (year by year) and those modeled by MORDOR V0, V1 and SD (evaluation model).

Table S4: The values of the individual associated evaluation metrics (NSE(Q), NSE(Qsea), NSE(dQ), NSE(FDC) and NSE(Qlow)) for MORDOR V0, V1 and SD for all the catchments over the period P1
