Interactive comment on "The effect of initial water distribution and spatial resolution on the interpretation of ERT monitoring of water infiltration in a landfill cover" *by* Gaël Dumont et al.

Anonymous Referee #1

Received and published: 9 July 2018

Please encourage the authors to check their formatting and the paper version that they uploaded. Section 5 is missing or skipped by the authors in the formatting and page 8 from line 15 repeats verbatum the first part of section 2.5. This is something that should be fixed in my opinion before even the review of this paper, which sounds very interesting according to the abstract, can be started. It is quite frustrating to find out that a section is repeated and one might be omitted when one is about halfway through the review of the paper. This version should never have been online in my opinion. I would be interested in reviewing of the paper if the authors would resubmit a correctly
