Thank you for the replies. The editorial board will evaluate your replies against the questions that were raised. I (i.e., the author of the short comment) do not have the rights to reject or accept your manuscript. The editorial board will decide whether to accept or reject the manuscript.

Regarding your reply on comment-13, I think, the authors of the manuscript should learn to understand the difference between “accusing” and “asking questions” during the discussion period of the manuscript. Thank you for acknowledging that the referees’ comments on Shen et al., 2018 were not online when the current version of the manuscript was submitted. In other words, I believe, it is safe to assume that you

C1

have cited Shen et al., 2018 based on your opinion on that manuscript(i.e., Shen et al., 2018).

Is it strongly offensive to ask questions during the discussion period? I am really confused. Asking questions is the most fundamental human rights. Moreover, I do not understand the reason for advising me to step back from asking questions during the discussion period.

Anyway, good luck with your manuscript.
