

Interactive comment on “A partially-coupled hydro-mechanical analysis of the Bengal Aquifer System under hydrological loading” by Nicholas D. Woodman et al.

Anonymous Referee #1

Received and published: 24 August 2018

This paper is about a partially-coupled hydromechanical modeling of an aquifer. Authors have used a simple coupling scheme for this purpose. In terms of novelty, I don't see any new method or development. The only new thing I can see here is just the application, which I think is not enough. Besides, due to using the commercial software, COMSOL, the results do not seem too realistic. I expected to see some 3D models representing the deformation because of the loading. Therefore, this paper is not a journal paper and I don't recommend its publication.
