

Interactive comment on “Identifying rainfall-runoff events in discharge time series: A data-driven method based on Information Theory” by Stephanie Thiesen et al.

B. Schaefli (Editor)

bettina.schaefli@unil.ch

Received and published: 22 November 2018

Both reviewers state that the presented method for flood event identification based on information theory is interesting and contains novel aspects; they also both discuss that the manuscript requires methodological clarification at several instances and a comparison with another method (as benchmark). Accordingly, I invite the authors to revise their manuscript along their responses in the public discussion. The revised version will go into re-review.
