Received and published: 20 February 2019

Dear authors,

three reviewers have provided feedback on the first version of your manuscript. The evaluations are really mixed. Some of the comments raised by reviewers #2 and #3 are rather critical not only regarding the presentation, but also challenging the content, such as the overall modeling strategy and novelty. You are encouraged to post a short comment during the interactive discussion phase, addressing the most critical general points. This provides a chance for direct interaction with the reviewers.

[Discussion paper](#)

To allow for this interaction, I have extended the interactive discussion until end of February. Please also allow some time for the reviewers responses. There is no need yet to include a complete point to point response or new version of the manuscript, as there will be time to prepare and post it after the end of the interactive discussion.

I am looking forward to your comments, Anke Hildebrandt
