Received and published: 13 February 2019

Both reviewers come to the conclusion that the paper is of potential interest for the readers of HESS but that it requires major revisions and re-review before it can be published. These revisions apply to various aspects of the paper and the underlying model analyses. Above all, the objective of the paper and how this adds to existing literature has to be much clearer. Important methodological choices have to be better explained and referenced. I invite the authors to submit a revised version that carefully addresses all the raised points along the lines of the public discussion. I would like

C1

to underline that this revision and corresponding "answers to reviewers comments" (rebuttal) should be as concise and explicit as possible in terms of methodological choices.
