

***Interactive comment on “Hydroclimatic control on suspended sediment dynamics of a regulated Alpine catchment: a conceptual approach” by Anna Costa et al.***

**Anonymous Referee #1**

Received and published: 18 February 2018

Authors have prepared a revised version of the manuscript where they have put more focus on the investigation of the hydroclimatic controls on the suspended sediment dynamics. Authors have considered my previous comments (<https://www.hydrol-earth-syst-sci-discuss.net/hess-2017-419/>) and mostly incorporated them in the revised version of the manuscript. Thus, I suggest to accept the resubmitted/revised paper.
