Gesualdo: hess-2019-134

Review:

What a pleasure to read a paper which makes good sense and is valuable in its contribution to alert authorities in San Paolo to imminent problems, with enough time to anticipate thwarting disaster. The case is well argued, easy to read, provides useful results applying modern methodologies, is workman like and avoids complexity.

Of course, there is always a small error to be attended to, but these are very few.

I am returning the marked up version of the paper with this review and recommend publication when these have been addressed.

Good job, well done!
