Received and published: 6 September 2019

Dear authors,

Thank you for this elaboration. I now see that eq.(24) is the amplitude, whereas eq.(18) refers to the range, which is twice as large. That was not immediately clear to me.

I shall now take the decision that you are invited to submit a revised paper and that in the supporting letter you clearly indicate the changes made. Since you have addressed the concerns of the reviewers so well in the discussion, I don't consider there is a need for a second review if these concerns are properly addressed in the revised paper.
