

***Interactive comment on* “Technical note: comparison of water vapor sampling techniques for stable isotope analysis” by César Dionisio Jiménez-Rodríguez et al.**

Anonymous Referee #2

Received and published: 7 November 2019

The study of Jiménez-Rodríguez et al. examines different ways of sampling and storing atmospheric water vapor for water stable isotope analysis in the lab. Their technical note is very well written and the photos and technical drawings provided in the Supplementary are very helpful and support the description of the experiments in a very concise way. In addition to questions raised by referee 1, I have a few more questions and suggestions on improving the manuscript that you can find in the uploaded pdf file.

Please also note the supplement to this comment:
