

Interactive comment on “Evaluation of Low Impact Development and Nature-Based Solutions for stormwater management: a fully distributed modelling approach” by Yangzi Qiu et al.

Anonymous Referee #1

Received and published: 2 September 2019

The manuscript presents a sustainable approach for storm management, which is interesting to the hydrologists and decision-makers. However, I do not see a novel contribution, the manuscript is near to be consultant report rather than academic research. The manuscript does not introduce new method or concept. In addition, the application has been applied for only one case study and show the findings while such findings could be completely difference in case it has been applied in different case study.
