I will not comment the content and methodology of this paper.

But I would like to point out that there was already another paper published in 2017 which investigates the river discharge of the Niger Basin by using satellite altimetry and in-situ data. Therefore, I would strongly recommend to consider and discuss the following publication in your paper.

Tourian M.J., Schwatke C., Sneeuw N.: River discharge estimation at daily resolution from satellite altimetry over an entire river basin. *Journal of Hydrology*, Vol. 546, 230-247, 10.1016/j.jhydrol.2017.01.009, 2017
