## Interactive comment on "Emerging climate signals in the Lena River catchment: a non-parametric statistical approach" by Eric Pohl et al.

## **Anonymous Referee #2**

Received and published: 24 October 2019

This is an interesting paper which presents a new approach for detecting emergence of climate change, applied to a basin in eastern Siberia. The approach looks justified and offers some important advantages over more conventional approaches. I have attached my marked copy of the manuscript with several grammatical corrections, but otherwise should be accepted.
