

Interactive comment on “Complementary principle of evaporation: From original linear relationship to generalized nonlinear functions” by Songjun Han and Fuqiang Tian

Anonymous Referee #3

Received and published: 8 January 2020

The authors provided an informative yet in-depth review of the research activities over the past half-century using the complementary principle of evaporation. I enjoyed the reading and feel it is overall a timely and nice contribution to the hydrology community. nevertheless, I do challenge the authors to elevate the presentation quality, in a spirit to make it valuable for a variety of audiences, from those who are not very familiar with this type of research but would like to have some background information, to those who are really active in the field. In its current form, the writing style is still, more or less, in favor of the latter. Also, I feel it might be more straightforward to include the word "review" in the title and abstract. Otherwise, some readers may not realize this is a review article until the end of the introduction.
