

Authors have addressed my concerns in revised manuscript. I feel that manuscript is in good shape and could be accepted after minor revision. I have two concerns:

1. Kindly revise figure 3, figure S5 and figure S6. Plot should have OBS value and difference (in percentage for precipitation and runoff and in °C for temperature) between MME and OBS.
2. Quality of figures is not up to mark. I recommend to use Generic Mapping Tools (GMT) or R or other plotting software.
