Received and published: 15 June 2020

We have addressed and carefully considered the constructive comments/inputs by Reviewer #2 and made the suggested revisions and modifications where we find them appropriate. We very much appreciate the extensive review of our manuscript provided. Altogether we believe the manuscript with the modifications has improved with the revisions made and we very much hope that you will consider the revised manuscript for publication. We agree with the Reviewer #2 that this manuscript do not only address the scope of the special issue on “Water, isotope and solute fluxes in the soil–plant–atmosphere interface: investigations from the canopy to the root zone” and would hence be misplaced in this issue.
