## 4. Results

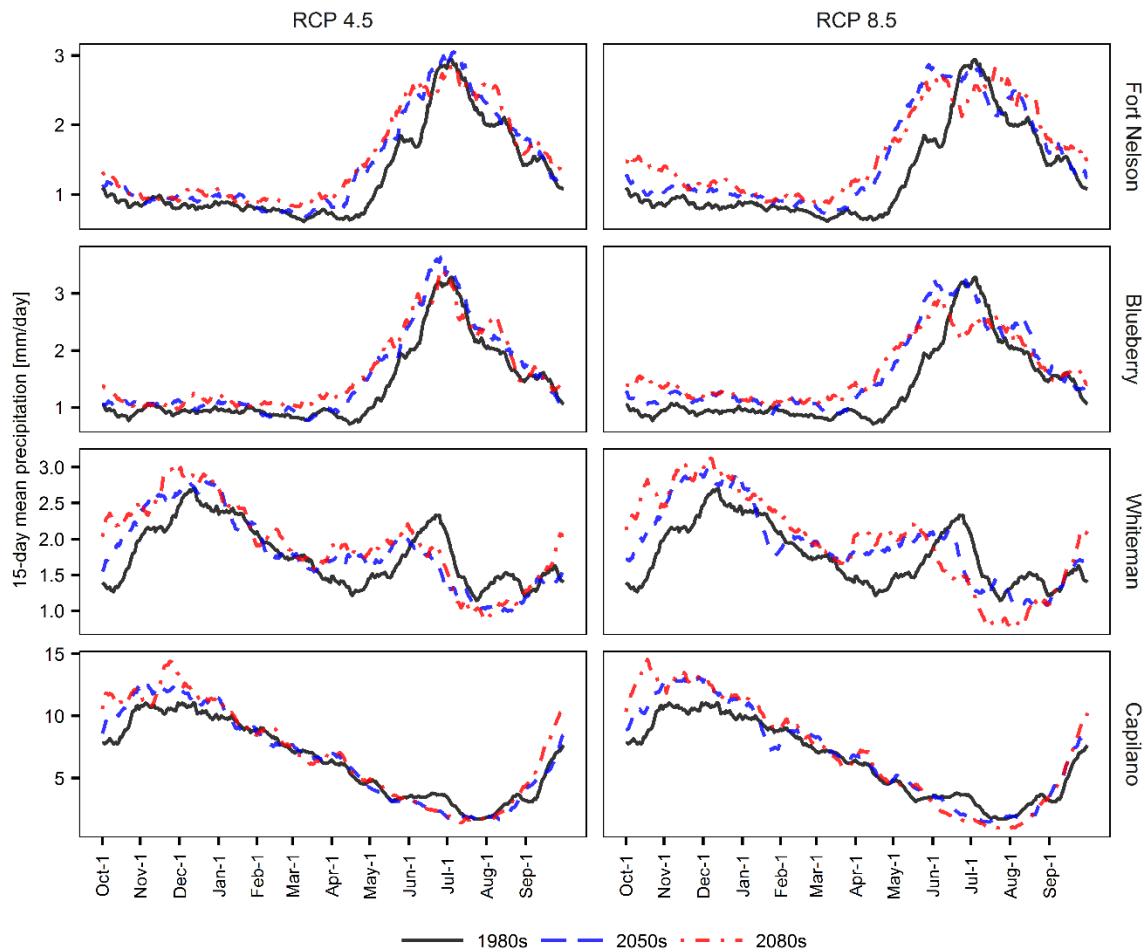

### 4.1 Climate change impacts on annual and intra-annual water balance

**Table S6.** Mean annual values and absolute difference ( $^{\circ}\text{C}$ ) in mean annual temperature (Temp) and mean annual values (mm/year) and relative difference (%) in mean annual precipitation (Precip), peak snow water equivalent (SWE), annual runoff, actual evapotranspiration (AET), and groundwater recharge for 1980s baseline (1970-1999) versus 2050s (2040-2069) and 2080s (2070-2099) for representative concentration pathway (RCP) 4.5 and RCP 8.5.

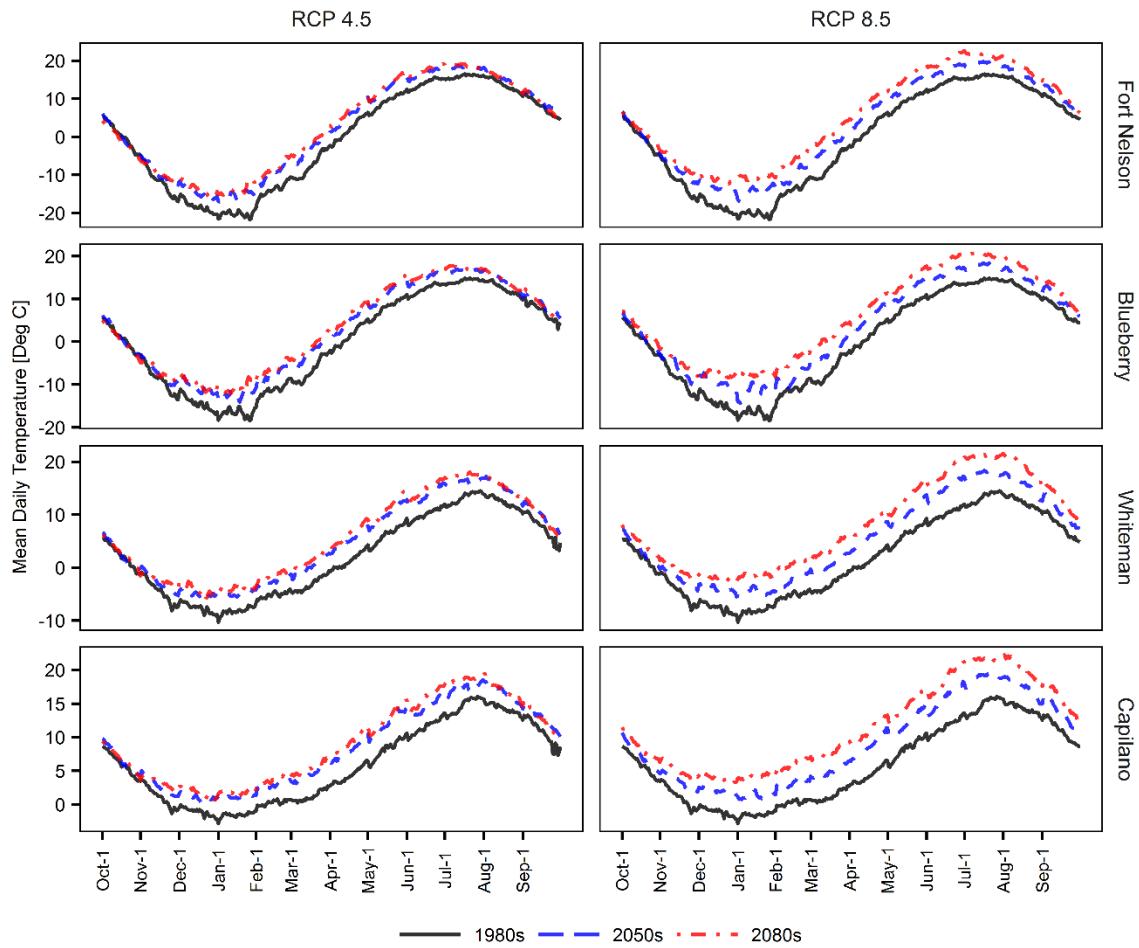

Time Period	RCP	Fort Nelson		Blueberry		Whiteman		Capilano	
		Mean	$\Delta$	Mean	$\Delta$	Mean	$\Delta$	Mean	$\Delta$
Temp	1980s	--	-0.6	--	0.0	--	2.1	--	5.9
	2050s	4.5	2.1	+2.8	2.7	+2.7	4.8	+2.8	8.4
	2050s	8.5	2.9	+3.5	3.3	+3.4	5.5	+3.4	9.1
	2080s	4.5	2.8	+3.4	3.3	+3.3	5.6	+3.5	9.1

	2050s	8.5	368	+27.5%	221	+14.0%	258	+10.6%	783
	2080s	4.5	360	+24.9%	213	+10.0%	254	+8.7%	771
	2080s	8.5	394	+36.5%	229	+18.5%	264	+13.0%	742

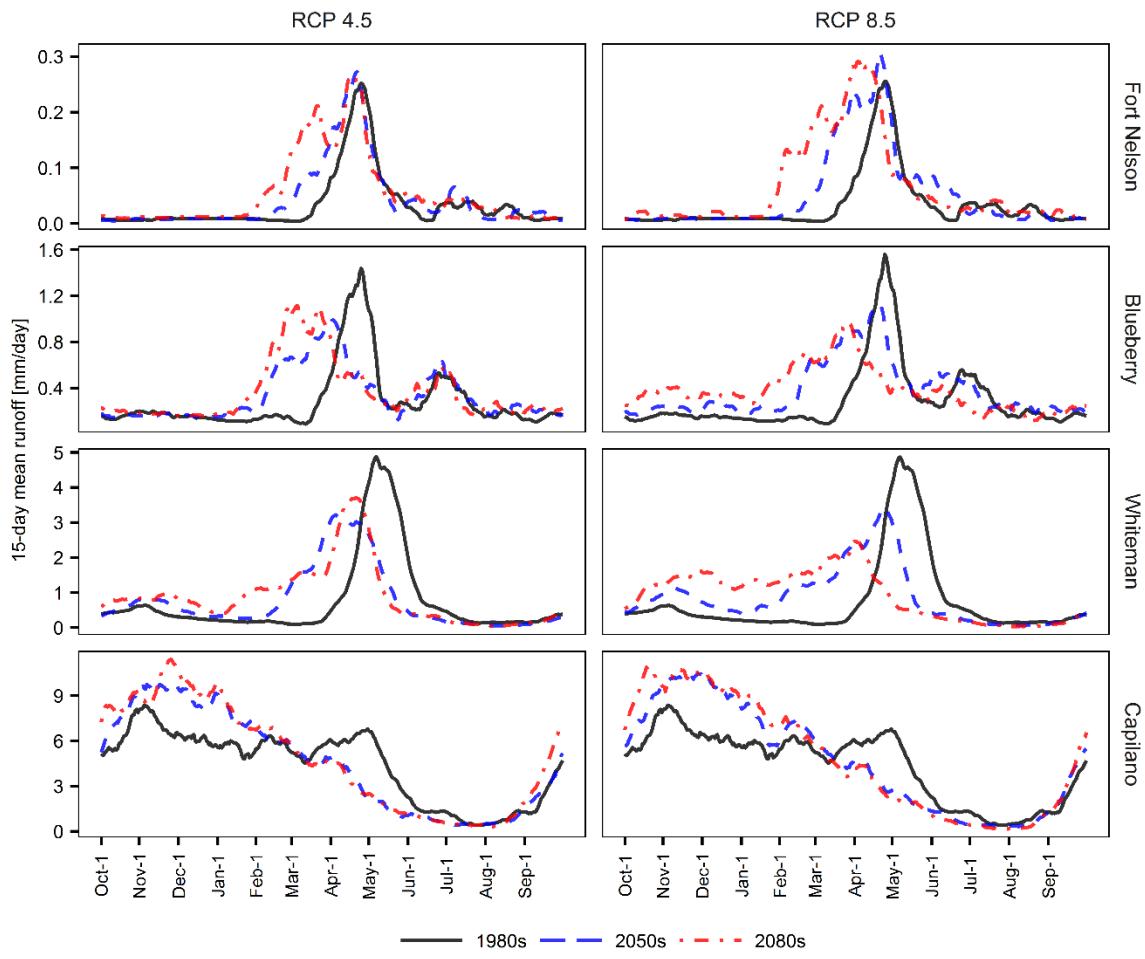

**Figure S1.** Absolute change in annual climate and water balance components for the 1980s baseline (1970-1999) versus 2050s (2040-2069) and 2080s (2070-2099) for representative concentration pathway (RCP) 4.5 and RCP 8.5, including mean annual temperature (Temp), annual precipitation (Precip), peak snow water equivalent (SWE), annual runoff, annual actual evapotranspiration (AET), and annual groundwater recharge. Blue and orange shading indicate a significant ( $p < 0.05$ ) increase or decrease relative to the baseline period, as assessed with the two-sided Mann-Whitney U test. Arrows are added for clarity where boxplot shading is unclear.

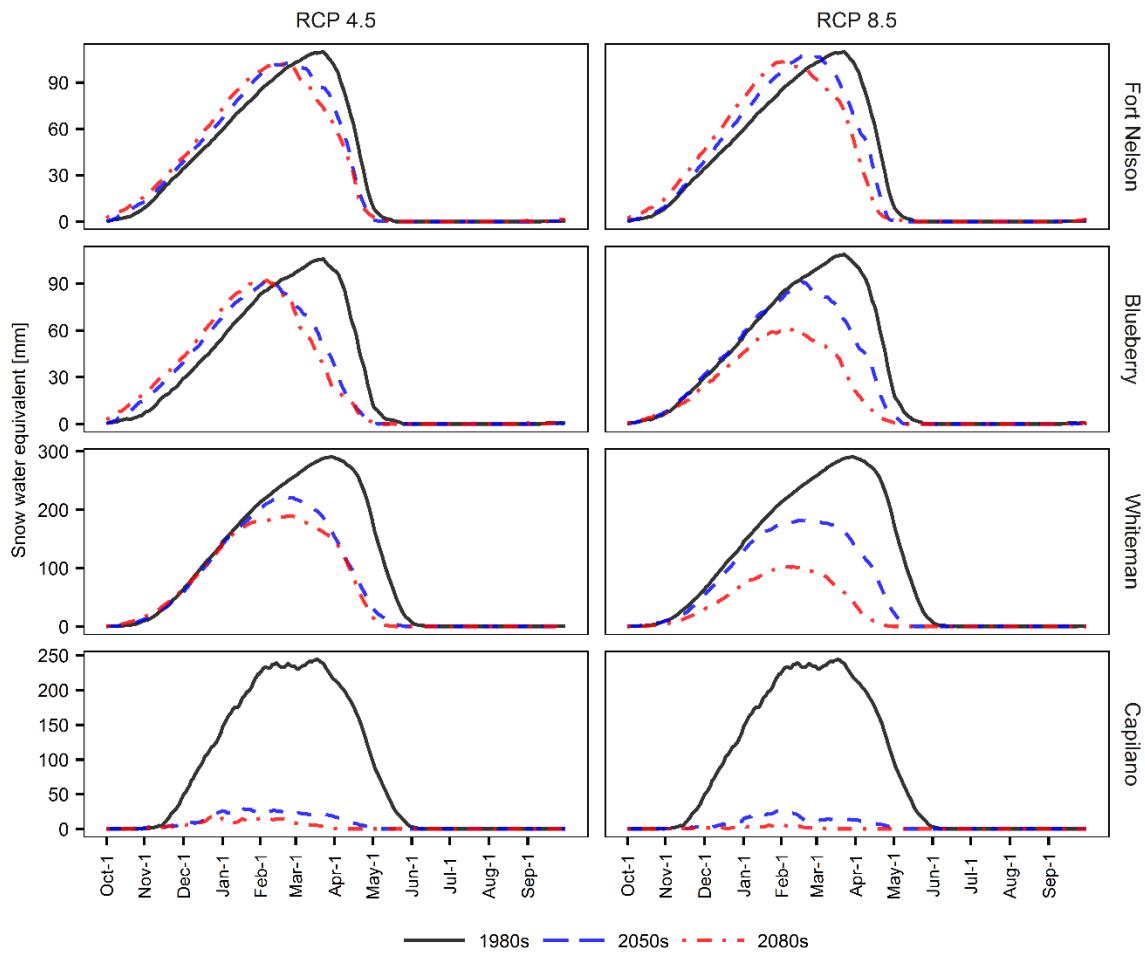

**Figure S2.** Smoothed 15-day mean precipitation rate for the 1980s baseline (1970-1999) versus 2050s (2040-2069) and 2080s (2070-2099) for representative concentration pathway (RCP) 4.5 and RCP 8.5.

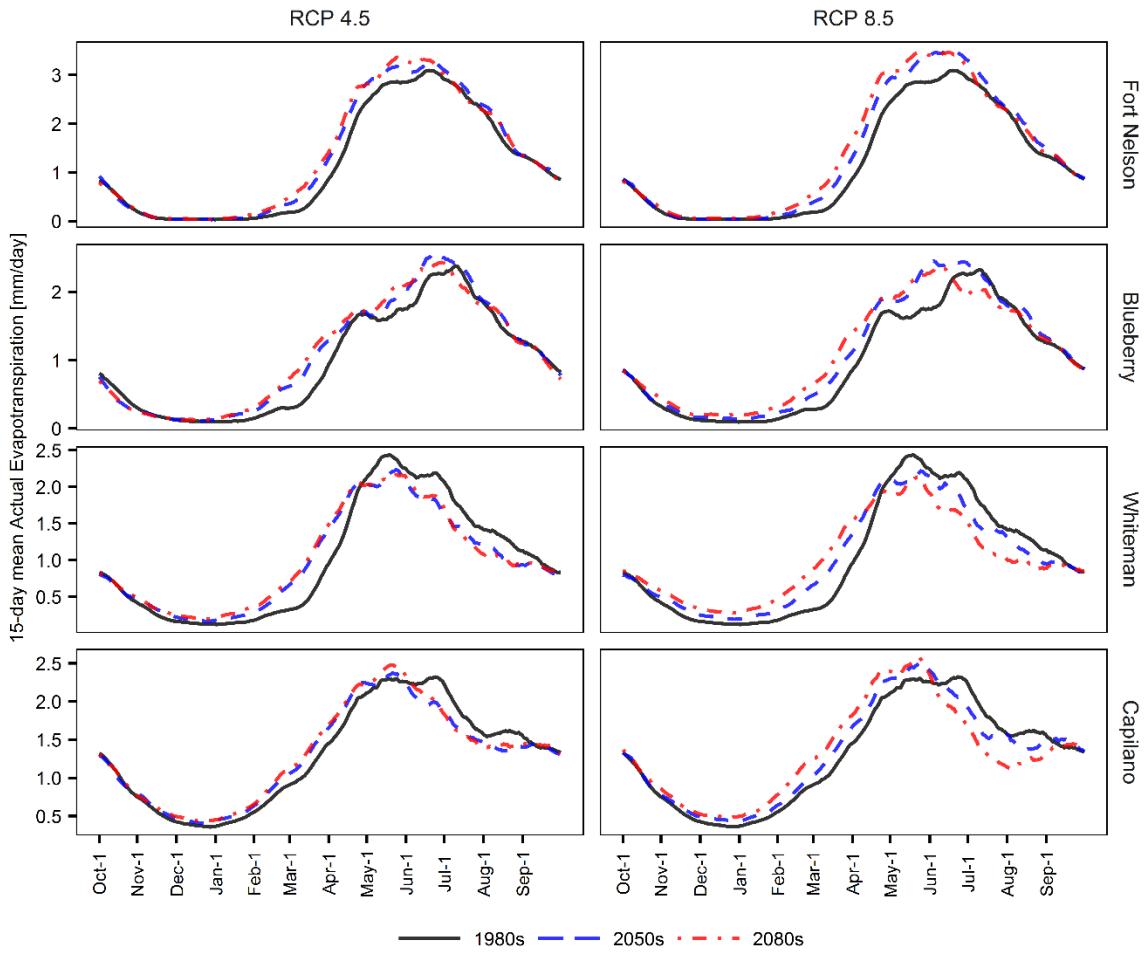

**Figure S3.** Mean daily temperature for the 1980s baseline (1970-1999) versus 2050s (2040-2069) and 2080s (2070-2099) for representative concentration pathway (RCP) 4.5 and RCP 8.5.

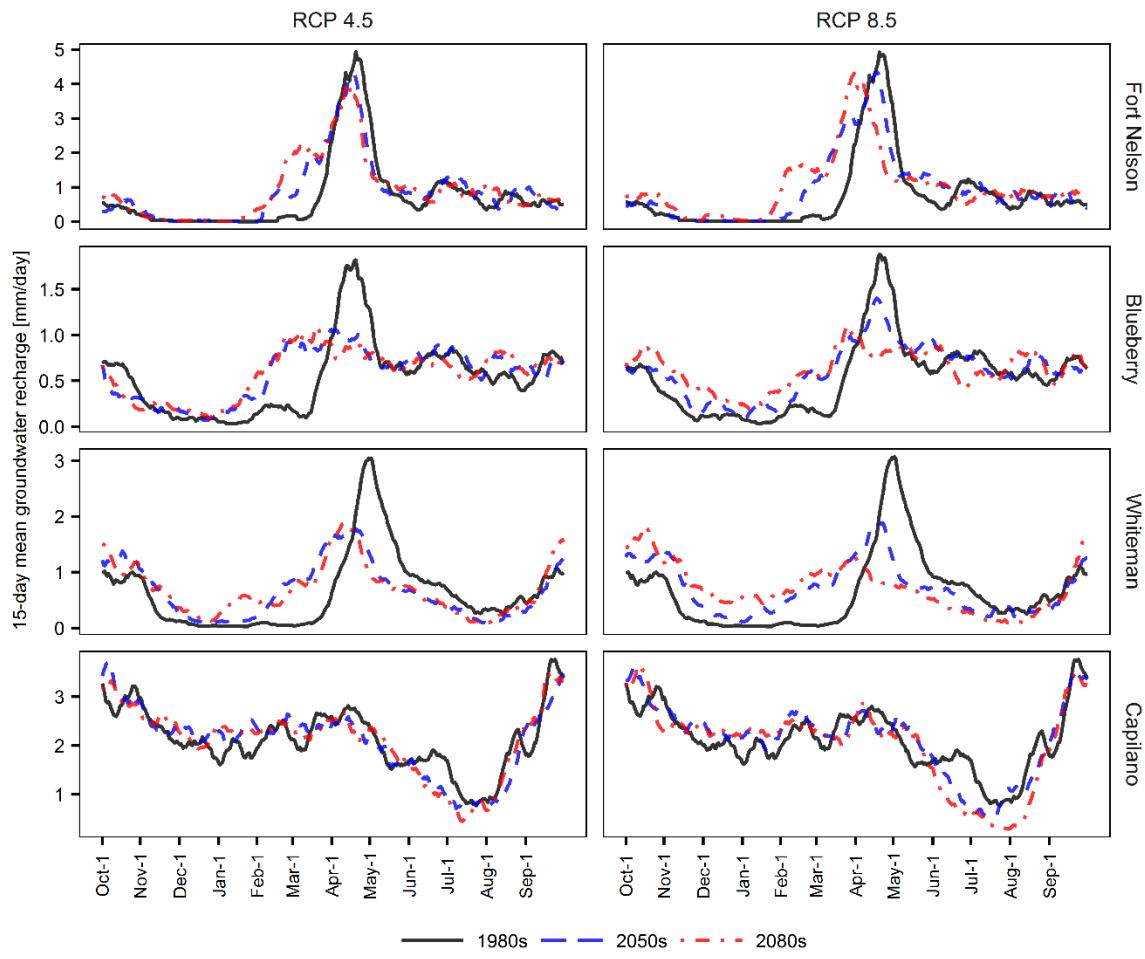

**Figure S4.** Smoothed 15-day mean daily runoff for the 1980s baseline (1970-1999) versus 2050s (2040-2069) and 2080s (2070-2099) for representative concentration pathway (RCP) 4.5 and RCP 8.5.

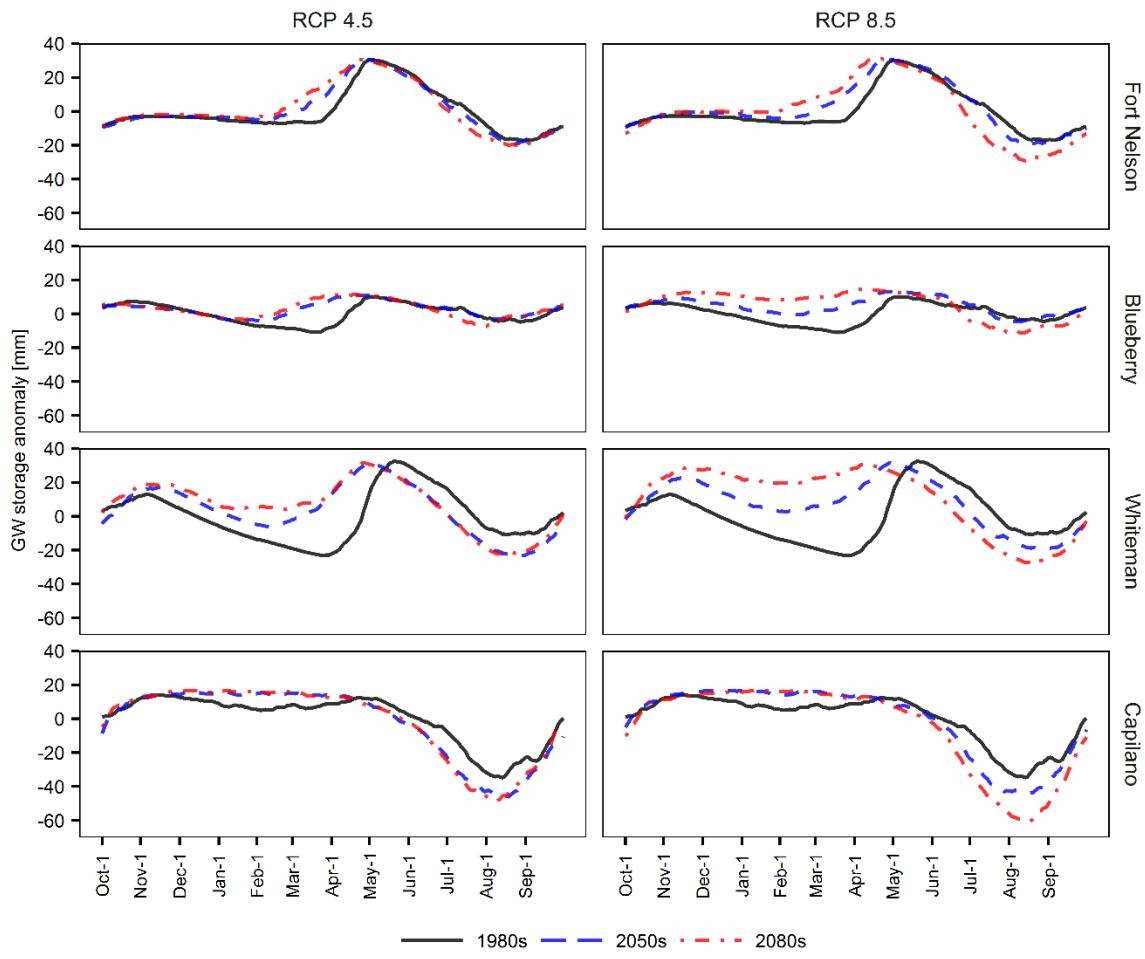

**Figure S5.** Mean daily snow water equivalent for the 1980s baseline (1970-1999) versus 2050s (2040-2069) and 2080s (2070-2099) for representative concentration pathway (RCP) 4.5 and RCP 8.5.

**Figure S6.** Smoothed 15-day mean actual evapotranspiration rate for the 1980s baseline (1970-1999) versus 2050s (2040-2069) and 2080s (2070-2099) for representative concentration pathway (RCP) 4.5 and RCP 8.5.

**Figure S7.** Smoothed 15-day mean groundwater recharge rate for the 1980s baseline (1970-1999) versus 2050s (2040-2069) and 2080s (2070-2099) for representative concentration pathway (RCP) 4.5 and RCP 8.5.

**Figure S8.** Mean daily groundwater (GW) storage anomaly (calculated as the mean *daily* value minus the baseline mean *annual* value) for the 1980s baseline (1970-1999) versus 2050s (2040-2069) and 2080s (2070-2099) for representative concentration pathway (RCP) 4.5 and RCP 8.5.

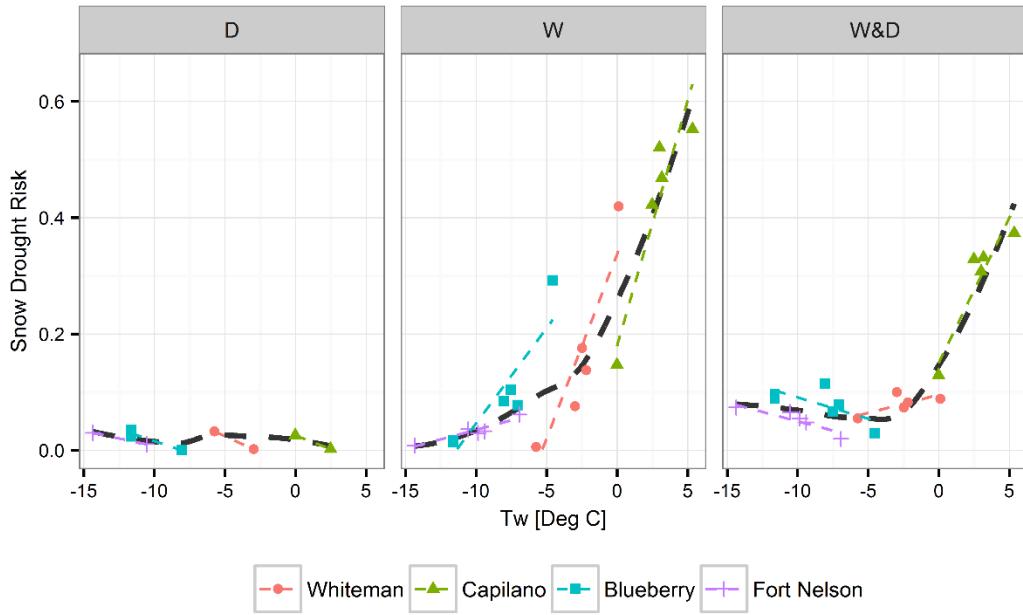

## 4.2 Snow drought

**Table S7.** Frequency (fraction of years) of dry (D), warm (W), and warm and dry (W&D) snow droughts. Baseline 1980s (1970-1999) versus 2050s (2040-2069) and 2080s (2070-2099) for representative concentration pathways (RCP) 4.5 and 8.5.
