Interactive comment on "How rainfall event characteristics affect the applicability of I$_{30}$ as an index of intense or erosive rainfall: a brief review with proposed new rainfall index" *by* David L. Dunkerley et al.

David Dunkerley

david.dunkerley@monash.edu

I sincerely thank Prof Marqués Pérez for taking the time to review and comment on my manuscript. The feedback is most helpful and much appreciated. All of the comments will be followed in the preparation of a revised manuscript. I particularly appreciate the helpful comments concerning the sequence of presentation, and the need for fuller Figure captions that can be read and understood independently of the text of the paper.
