

“Quantifying the Impacts of Compound Extremes on Agriculture and Irrigation Water Demand” by Iman Haqiqi et al.

Responses to the Editor

Overall response: We would like to thank the Editor and reviewers for their positive comments about the relevance and the significance of this work. Their detailed suggestions throughout the review process have helped us to improve the paper significantly. Following their comments also helped us to enhance the clarity, flow, and structure of the manuscript. Below, final corrections are described in response to the “minor revisions”.

Comment: The panels in Figure 4 are preferably ranked from left to right (instead of top to bottom) to make the time progression more clearly visible.

Response: Thanks for your suggestion. We agree that the left to right ranking would better reflect the time. So, the revised Figure 4 provides “April, May, June” at the top and then “July, August, September” at the bottom.

Comment: And in line 322 a crucial typo is found (the period should be a comma, I believe)

Response: Thanks for catching this typo. This should be a comma. It is corrected in the revised manuscript.
