Received and published: 12 October 2020

This technical note received three reviews; all reviewer comments conclude that the paper is interesting for the readers of HESS and give detailed indications on how to improve the paper. This namely includes additional details on some methodological choices. I would like to invite the authors to submit a revised version of the paper that would in particular also greatly benefit from a more didactical introduction (see reviewer 2) and from a careful language check.
