Received and published: 9 September 2020

Dear Authors, We received 2 critical review reports on your manuscript. Both reviewers recognize the novelty of the study and recognize the potential of gravimeter and tilt measurements for unravelling hydrological processes. Yet both reviewers raise major concerns on the readability of the manuscript, in particular for a hydrological audience. Both reviewers also made suggestions to shape the manuscript so that it becomes aligned with the profile of HESS readership. Both reviewers also made detailed suggestions on more specific aspects. I concur with these review reports and suggest you to proceed with your replies and major revision of your manuscript. The revised manuscript will be send out for review again to the original reviewers. Sincerely yours,
