Dear Authors,

I apologise for the delay in closing the discussion on your paper HESS 2020 83. The paper was send out to many potential reviewers, but who declined systematically the review invitation. This may suggest that there is little scientific interest in the study sofar. Fortunately, 2 referees finally send their report.

The first reviewer suggest to reject the paper as he observes 3 major methodological concerns. The second reviewer suggests a major revision.

I read the manuscript and review reports in detail. I consider the first review as very critical and the concerns raised by this reviewer should be completely addressed in your final answer. In case you consider that these concerns cannot be addressed sufficiently, you can consider to withdraw the paper.

I look forward in learning your final response on these reviewer comments.

Sincerely yours,

Interactive comment on Hydrol. Earth Syst. Sci. Discuss., <https://doi.org/10.5194/hess-2020-83>, 2020.
