

## Response from the authors to technical corrections made by editor Gerrit de Rooij

The authors would like to thank the editor for taking the time to provide these corrections.

### Comments to the author:

Dear authors,

I think the latest round made the paper substantially more solid, both in the content and in the way you argue your case. I am therefore happy to inform you that I can accept the paper for publication.

Thank you for accepting the paper for publication. We agree that the latest round strengthened the paper.

I only have a few formatting details that will come up anyway as the paper is processed, and that should only take a few minutes to take care of:

lines 133, 137, 138, 159, 160 (perhaps more): symbols in regular font in the text appear in italics in the equations. Please convert the text fonts to italics as well.

We have edited the in-text symbols in section 2.1 and 3.2 to be italic like the equations they refer to.

And changed units in figures 2, 3 4 and 6 to be written exponentially.

I. 134: Hankel transform -> Hankel transforms

Edited

The caption of Fig. 7: there are no x- or y- coordinates in the figure. Perhaps replace 'x-axis' and 'y-axis' by horizontal 'axis' and 'vertical axis'.

Changed the wording in Fig. 7 caption from x- and y-axis to horizontal- and vertical axis respectively.
