Dear Pr. Manuela Brunner

Thanks for granting the acceptance of the manuscript.

I indeed spotted in the code that some maps were projected, some others not. I fixed this issue and provided all figures projected in the same system (ie. no distortion when resizing images anymore).

Best regards,

Yves

Dear authors,

Thank you very much for addressing my comments related to novelty and data sharing. While I think that these two comments have been satisfactorily addressed, it still appears to me that not all the maps displayed have the same map projection (2 and 6 different from 4,5, 8, and 10). I am happy to accept your manuscript after you have implemented these technical corrections.

Best regards,
Manuela
