24

25 **Figure S1.** Monthly time series of monitored P loads. Imputed values are depicted in orange. The
 26 green line denotes a least-squares linear fit among the data.

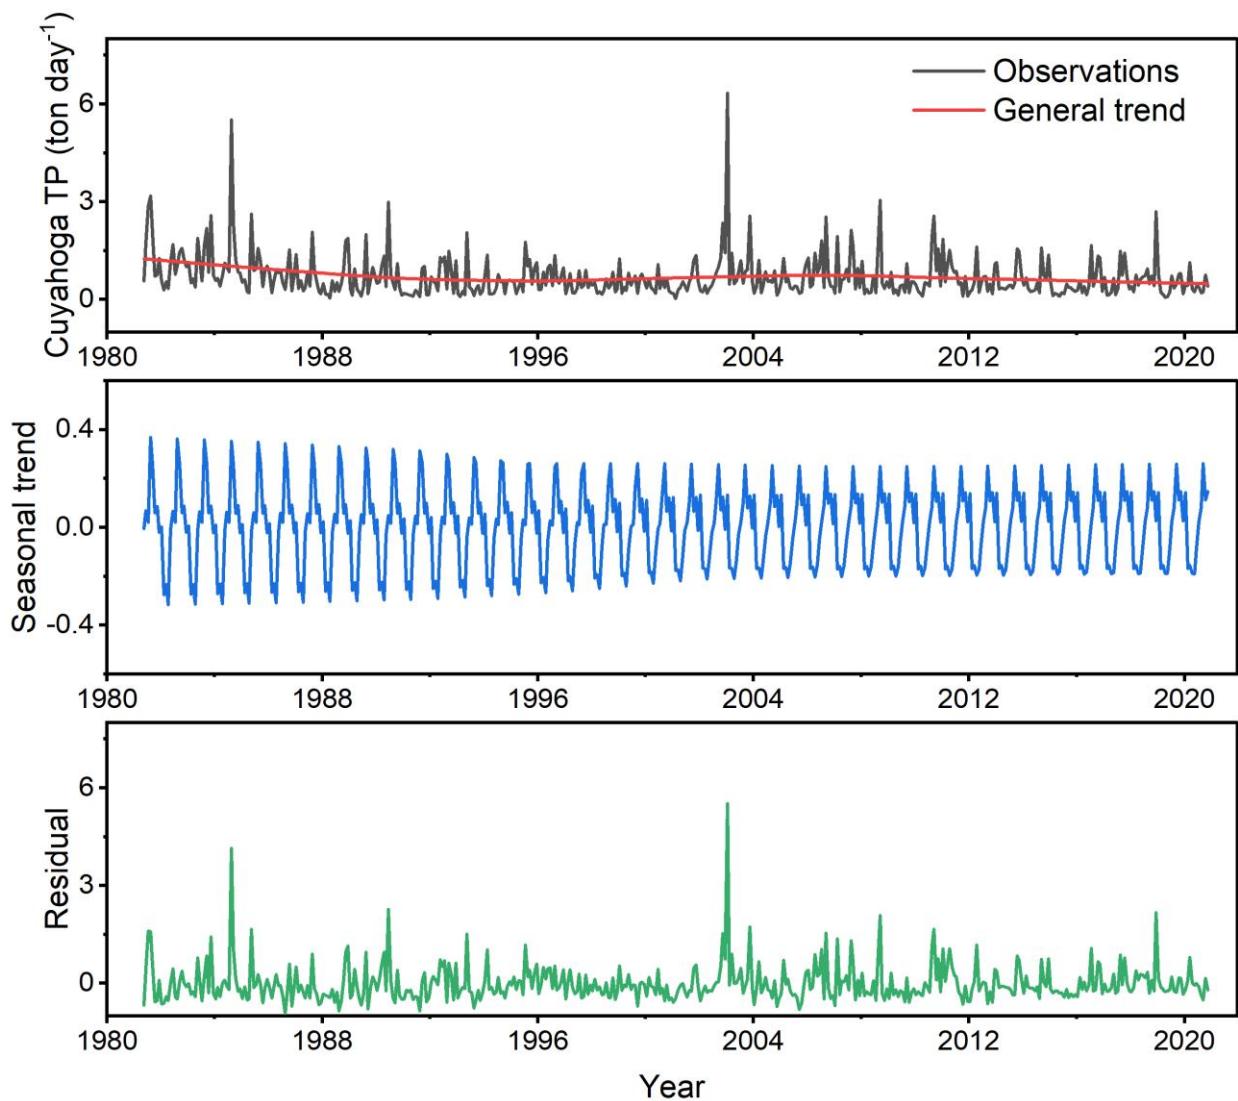

27

28

29 **Figure S2.** Monthly time series of monitored TSS loads and streamflow. Imputed values are depicted
 30 in orange. The green line denotes a least-squares linear fit among the data.

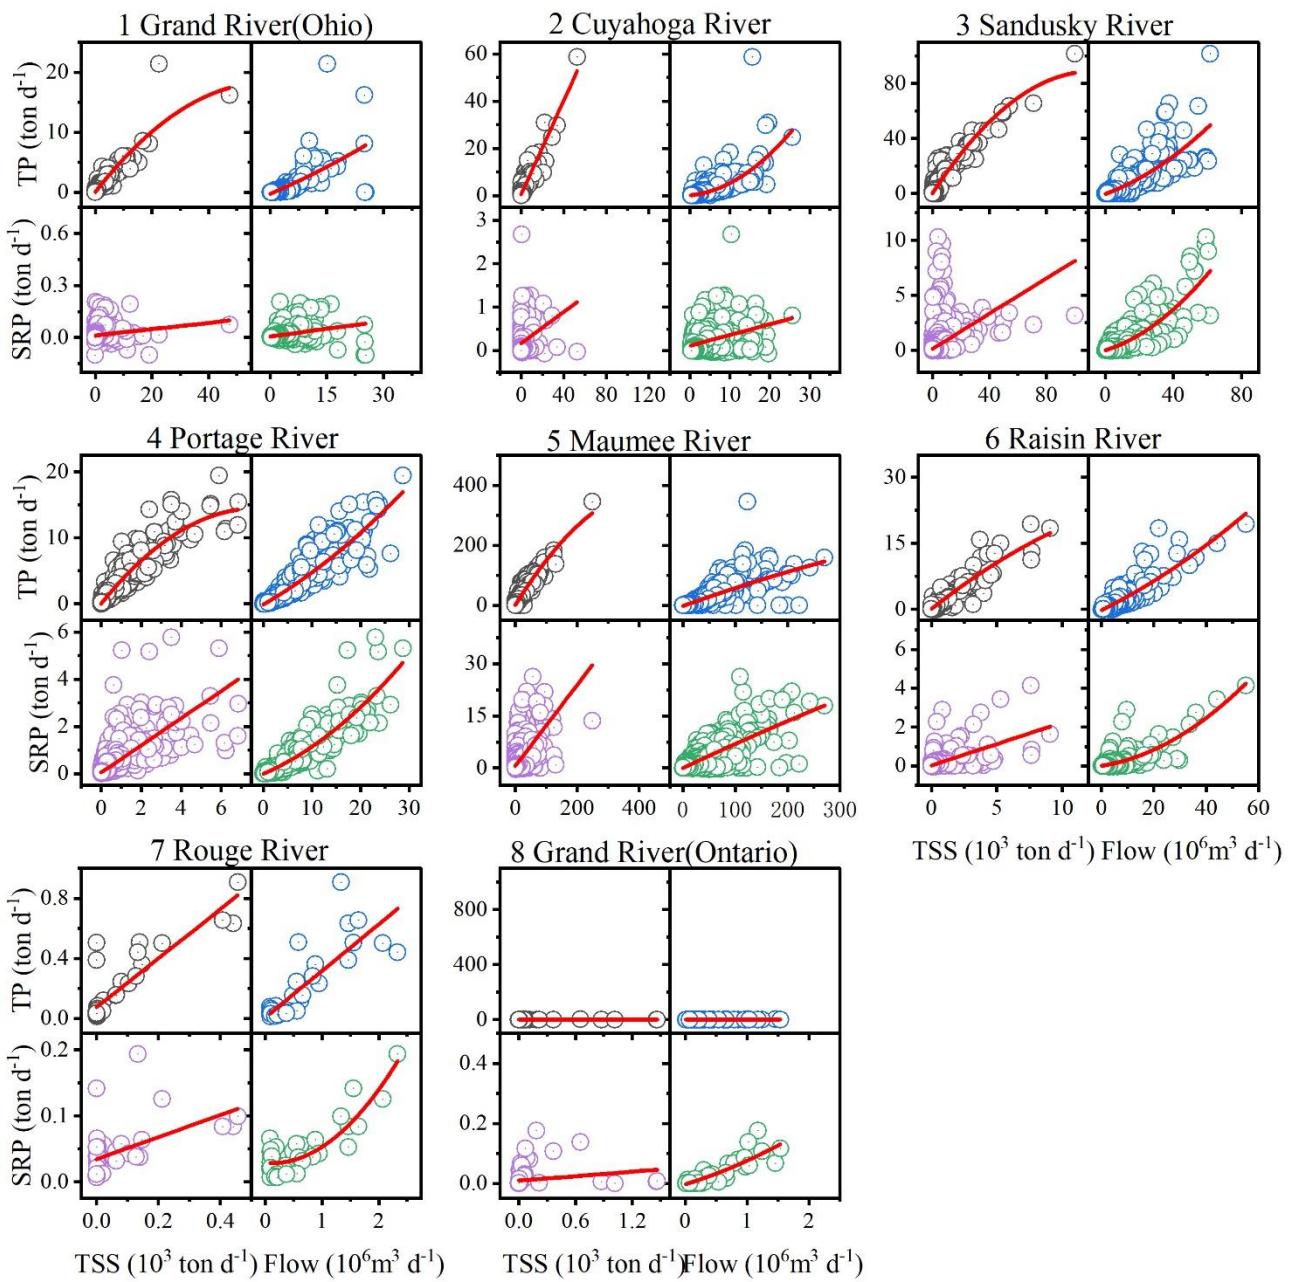

31

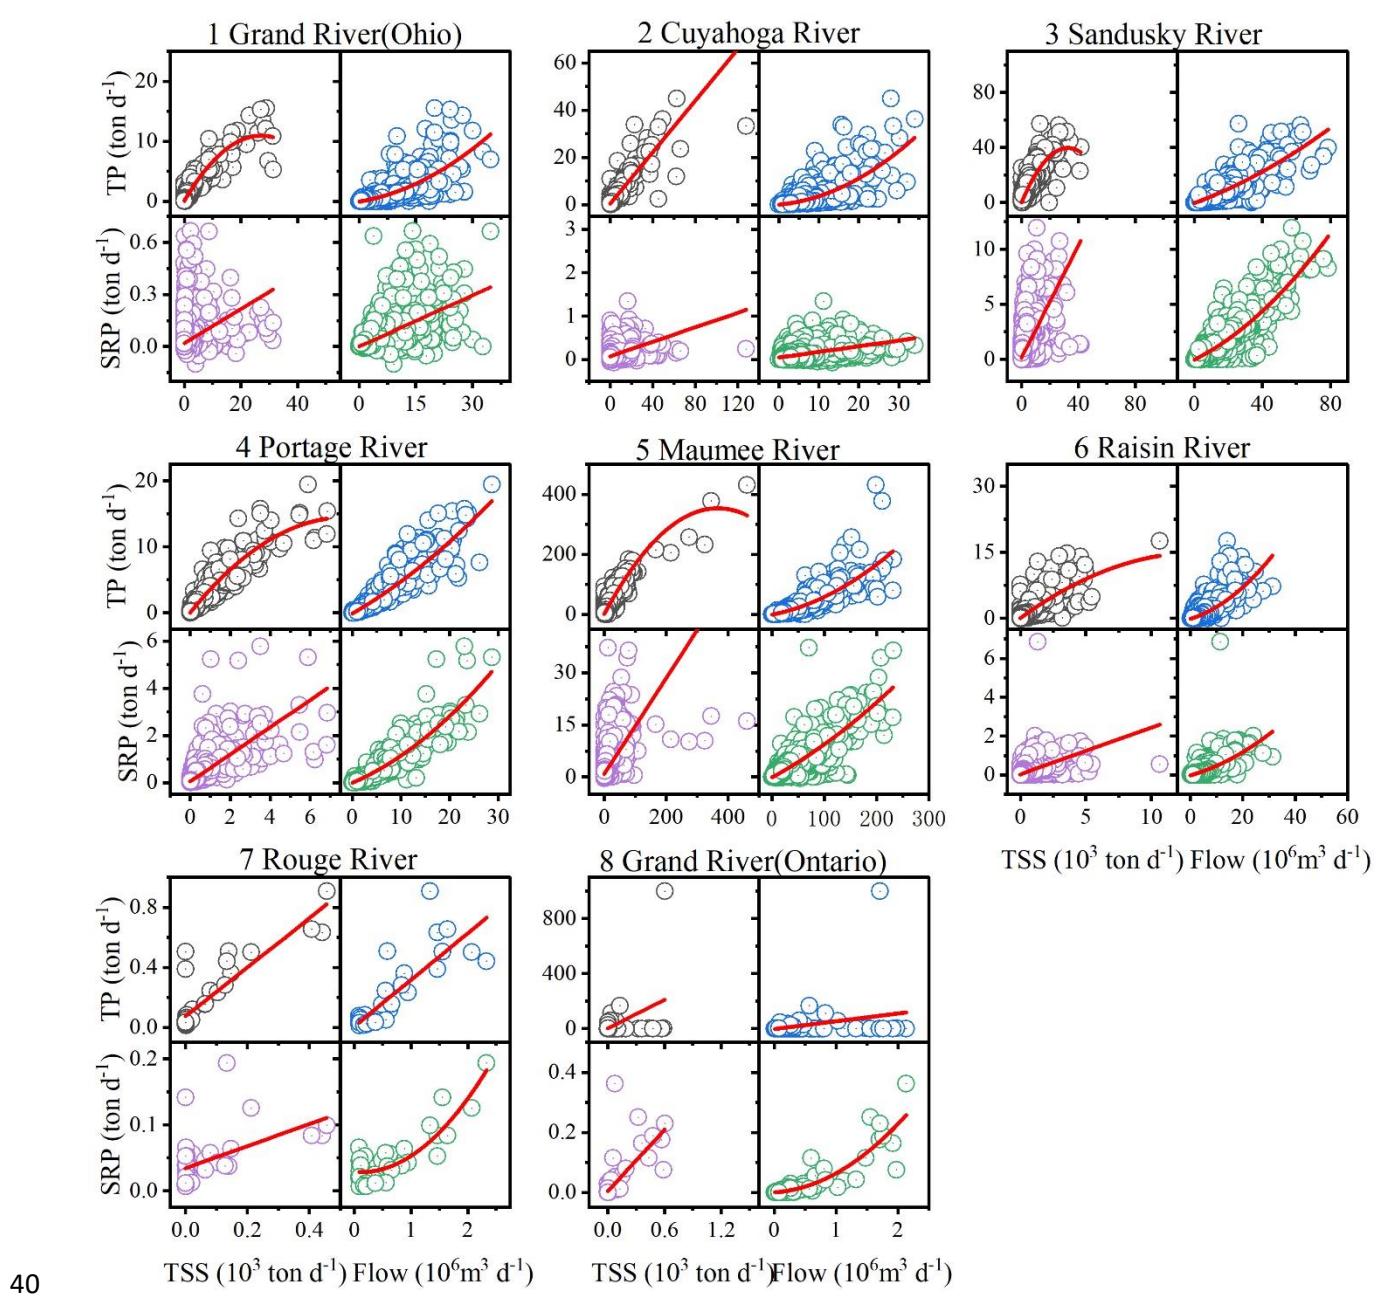

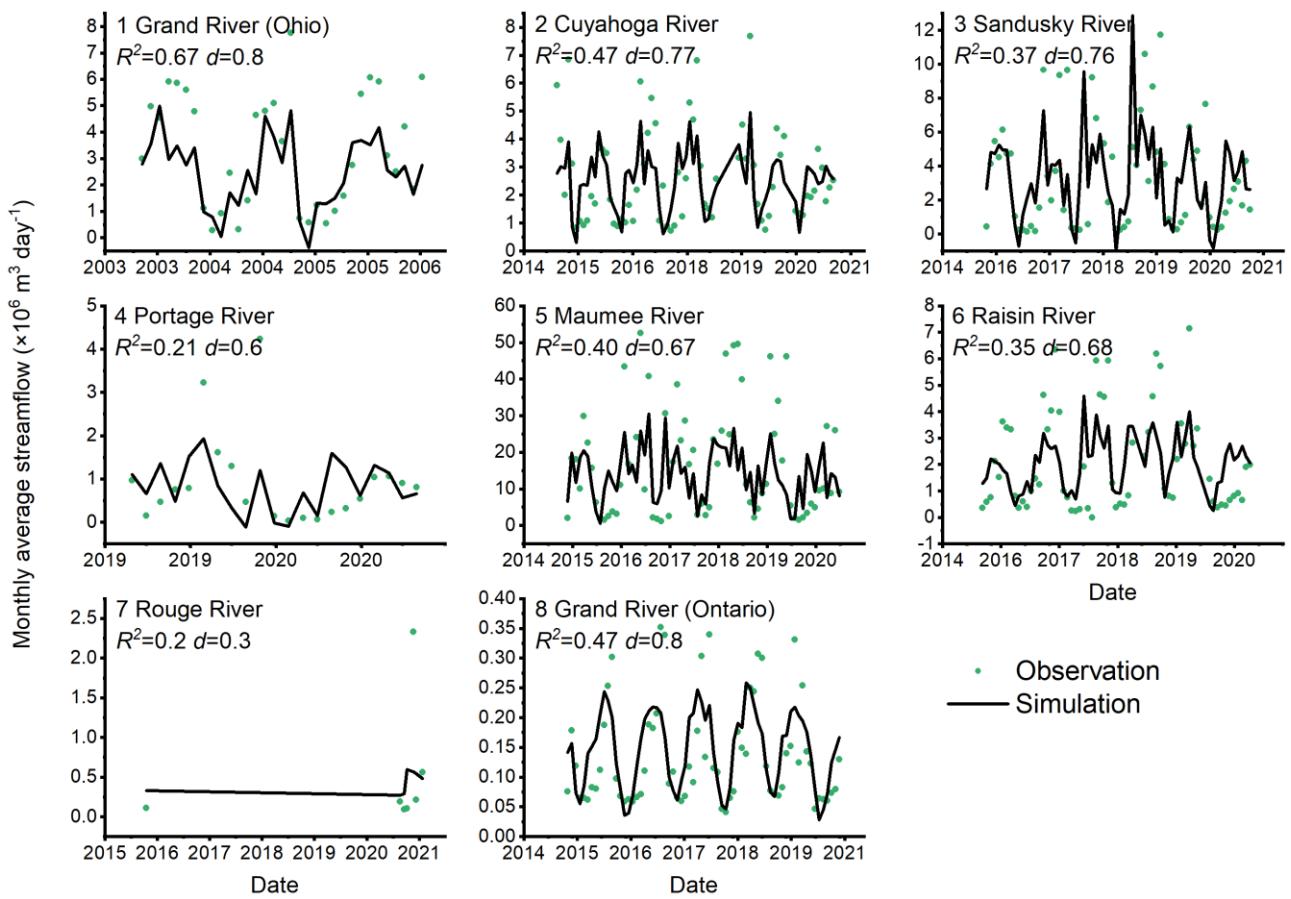

32

33 **Figure S3.** An example using STL method to decompose TP load time series data in Cuyahoga River
 34 into smoothed long-term and seasonal trends.

35

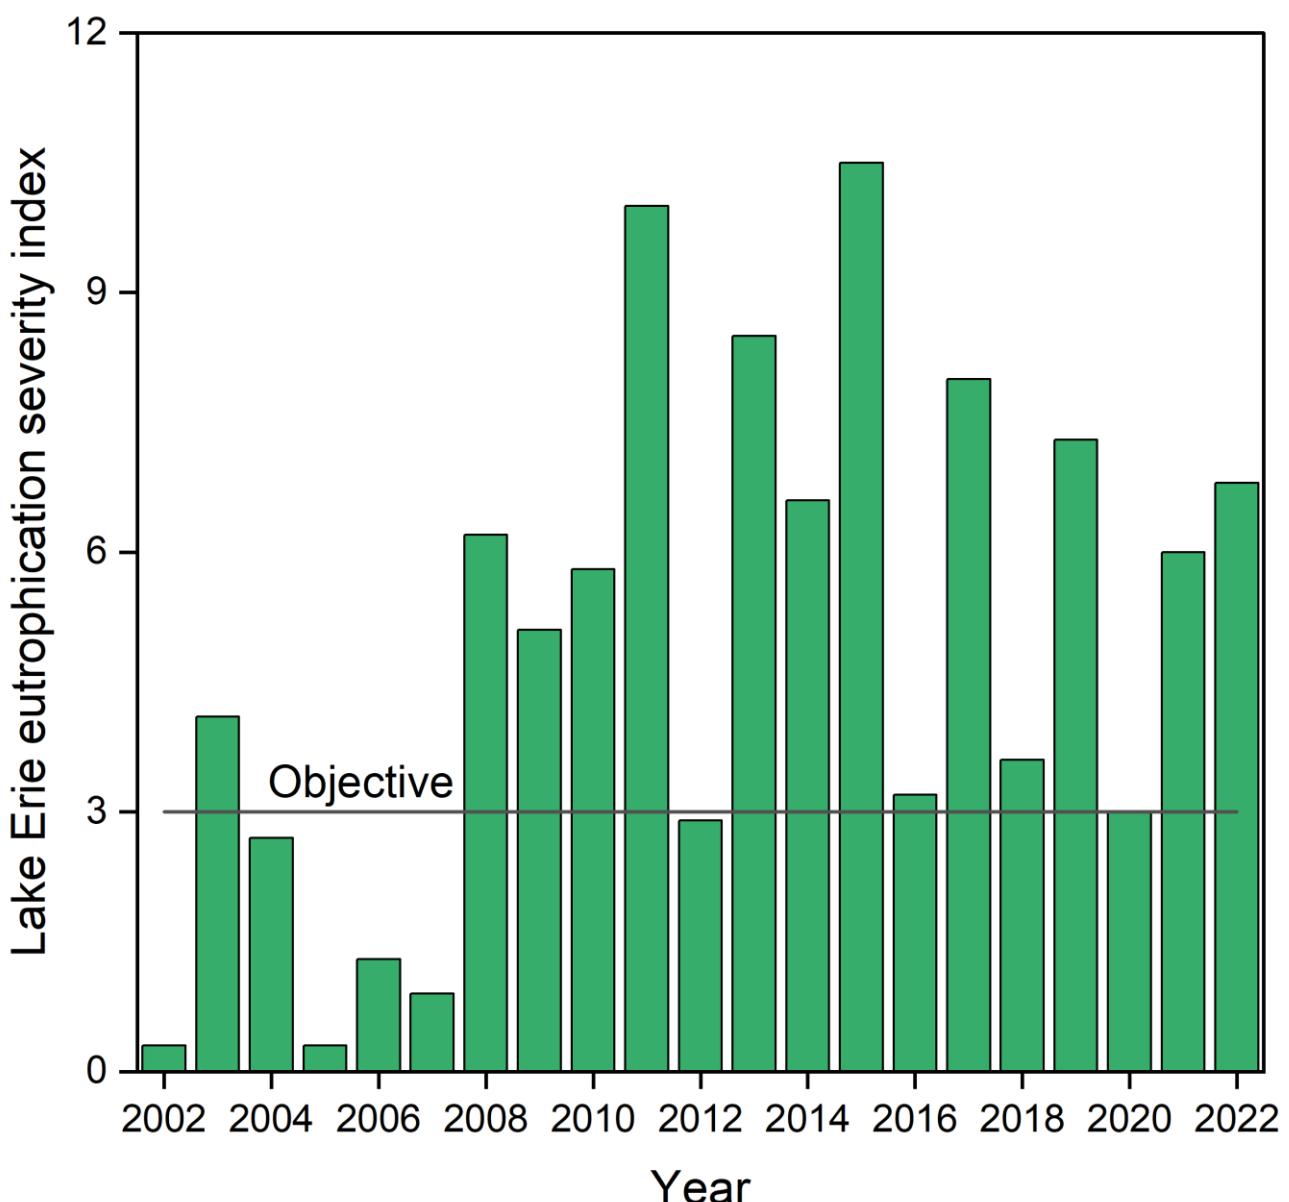

46

47 **Figure S6.** Predicted versus observed streamflow at the outlets of Lake Erie watersheds by using
 48 MLR model.

49

50

51

52 **Figure S7.** Temporal changes of Lake Erie eutrophication severity index. This information was
53 collected from NOAA National Ocean Service (<https://coastalscience.noaa.gov/news/2022-lake-erie-algal-bloom-more-severe-than-predicted-by-seasonal-forecast/>)

57

58

59 **Table S1.** Evaluation of MLR model performance for predicting river streamflow.

| River | leave-one-out cross validation | | |
|-----------------|--------------------------------|-----------------------|------------|
| | <i>RMSE</i> | <i>R</i> ² | <i>MAE</i> |
| Grand (Ohio) | 1.67 | 0.45 | 1.24 |
| Cuyahoga | 1.19 | 0.48 | 0.92 |
| Sandusky | 3.42 | 0.34 | 2.14 |
| Portage | 0.98 | 0.41 | 0.73 |
| Maumee | 11.58 | 0.31 | 8.88 |
| Raisin | 1.58 | 0.23 | 1.21 |
| Rouge | 0.59 | 0.01 | 0.42 |
| Grand (Ontario) | 0.11 | 0.23 | 0.08 |
