Response Letter HESS 05/25

Final Review - Acceptance

Editor Comments

Thanks for carefully considering the reviewer comments. Overall, I think the manuscript became much clearer during the review process and is now ready for publication.

We thank the editor for accepting the manuscript in its current version, but especially for the valuable inputs throughout the review process.

Kind regards

Reviewer 1 (Cyril Thébault - Minor Revision)

Dear Authors,

Thank you for your responses and changes in the manuscript. I greatly appreciate that an upper and lower benchmark with the initial SWAT model was used to better assess the benefits and limits of the SWAT-GL model. I have no further comments.

Kind regards,

Cyril Thébault

We thank the reviewer, Dr Cyril Thébault, for taking the time to revise our manuscript and for the very detailed and great input throughout the whole review process and we are happy that the paper is in shape for final publication.

Kind regards
